Dr Wei Jie <Wei.Jie@uwl.ac.uk>	1. Open Project – design and implementation of Web Services: **The aim of web services is to make data resources available over the Internet to applications (programs) written in any language. There are two approaches to web services: SOAP-based and RESTful. RESTful Web services have now been recognized as generally the most useful methods to provide data-services for web and mobile application development. The aim of the project is to study the concept of RESTful web services in depth and designing data-intensive web services for an application of your choosing. Students are invited to propose an application and to discuss this with the supervisor.**
